Wherever in the world quality matters Impact Tester - Portable

Overview

One of a range of ceramic testing equipment, the Anderen Portable Impact tester is a simple portable instrument that can be used as a quick and easy on-site quality assurance method or sales tool to demonstrate the resistance to impact of tableware and hotel ware. (plates)

Details

The Anderen Portable Impact Tester was designed to reproduce the effects of the ASTM ceramic test

Impact tester is fitted with an arbitrary scale that is used to compare the results from different samples.

Please note that it is not designed to be used for ASTM testing, but is an ideal tool to be used by quality inspectors when they visit outsource factories overseas to predict the outcome of formal ASTM tests

It is also ideal for sales representatives making client visits or at exhibitions to demonstrate the resistance to impact of a company's product.

The portable impact tester is supplied either as a bench top unit or fitted into a carrying case. Both versions are fitted with an high impact perforated stainless steel safety screen. As an alternative we can fit the impact tester with a clear acrylic guard (note picture does not show guard fitted)

The standard version is suitable for testing plates up to 200mm diameter, however we are able to customize the unit to fit larger plates. If this is needed please let us know what is the maximum size plate you wish to test. Usually the larger units are supplied as bench top only

The hammer is fitted with a replaceable hardened tip which can be reversed to extend its use. The instrument is supplied with 5 double sided tips as standard
